English — Upper-Intermediate (B2)

Skills

C#, .NET, ASP.NET Core, Entity Framework, Go, Node.js, TypeScript, JavaScript, PostgreSQL, MS SQL Server, T-SQL, Oracle PL/SQL, MongoDB,

About me

Backend engineer with 13 years of commercial experience in C# / .NET, specializing in high-load, fault-tolerant fintech systems: payments, banking products and insurance. For the last 4 years I have been the tech lead of a 10-person cross-functional team at Sravni.ru, where I redesigned the bank deposits platform and migrated it from PHP to .NET microservices.

My strengths are financial processes (reconciliations with banks and payment systems, refunds, accounting), bank and payment system integrations, legacy migrations, and event-driven architecture on Kafka with SAGA patterns. Core stack: C#, .NET, PostgreSQL, Kafka, RabbitMQ, MassTransit, Redis, Kubernetes; I have also built production services in Go and Node.js (TypeScript).

Experience

Tech Lead / Senior Software Engineer

Sravni.ru · August 2022 - Present

Project: Bank Deposits Platform

Tech lead of a 10-person cross-functional team (4 backend, 3 frontend, 3 QA) on the end-to-end deposit deal platform of a financial marketplace.

- Redesigned the end-to-end deal system architecture and migrated it from PHP to .NET microservices, improving the platform's stability and extensibility
- Designed the end-to-end deal process and the integrations with partner banks
- Automated reconciliations with banks and payment systems, refund processes and financial accounting for deals
- Introduced Kafka as the backbone of the event-driven model and implemented deposit auto-renewal with SAGA choreography
- Migrated data from MongoDB to PostgreSQL
- Built a hybrid cache manager with a Circuit Breaker for service fault tolerance

ClickHouse, Redis, Kafka, RabbitMQ, MassTransit, SAGA, Microservices, Event-Driven Architecture, REST API, OpenAPI, gRPC, GraphQL, Docker, Kubernetes, ArgoCD, GitLab CI/CD, TeamCity, Prometheus, Grafana, Jaeger, Kibana, Elasticsearch, OpenSearch, Vault, Consul, k6, xUnit, NUnit

- Set up observability: metrics and alerting in Prometheus and Grafana, tracing in Jaeger, logs in Kibana; ran load tests with k6
- Built a support admin panel: product management, customer and deal reports
- Run code reviews, make architectural decisions and break down tasks; own production reliability and response times

Stack: C# / .NET, PostgreSQL, MongoDB, Kafka, MassTransit, Kubernetes, ArgoCD, Prometheus, Grafana, Jaeger, Kibana

Project: CASCO (Auto Insurance)

- Built the end-to-end CASCO insurance deal service from scratch
- Integrated partner insurance companies
- Optimized data processing
- Implemented an error monitoring system

Stack: C# / .NET, Entity Framework, PostgreSQL, ClickHouse, RabbitMQ, Kafka, MassTransit, Redis, xUnit, Kubernetes, ArgoCD, Prometheus, Grafana, OpenSearch/Kibana, Jaeger

Senior Software Engineer

VK (VKontakte) • June 2020 – August 2022

Project: loyalty.rkeeper.ru

Reporting system based on r-keeper and DeliveryClub data.

- Built microservices for data collection, enrichment and aggregation and for building data marts for the reporting system
- Wrote complex analytical queries for reports
- Led development of an integration test framework for backend web services
- Led development of user notification microservices based on SAGA choreography

Stack: C# / .NET, Entity Framework, MS SQL Server, PostgreSQL, ClickHouse, RabbitMQ, MassTransit, Redis, GraphQL, NUnit, xUnit, TeamCity, Octopus, Kubernetes (Rancher), Grafana, Graylog

Lead Developer

Latoken • June 2019 – April 2020

Project: Crypto Integration

Web services for a cryptocurrency exchange: integrating ETH- and BTC-like blockchains into the exchange infrastructure.

- Led development of a unified blockchain integration platform, making new blockchain integrations 10x faster while reducing code size and the number of errors

Stack: C# / .NET, Node.js (TypeScript), PostgreSQL, ClickHouse, Kafka, gRPC, TeamCity, Kubernetes (Rancher), ELK, Grafana

Lead Developer

RFI BANK • February 2017 - June 2019

Project: Payment Processing

Development and maintenance of the bank's payment processing center; projects with the MasterCard and Mir payment systems.

- Developed an OpenAPI for integration with the bank's processing
- Configured GitLab CI/CD for Kubernetes deployments with health, liveness and readiness checks
- Containerized .NET Core APIs with Docker

Stack: C# / .NET Core, C, Kafka, Oracle PL/SQL, PostgreSQL, GitLab CI/CD, TeamCity, Docker, Kubernetes

Software Developer

Major-Auto • June 2013 - January 2017

Project: Major-Auto CRM

Internal corporate information system of an automotive holding. Grew from intern to mid-level developer.

- Designed database structures and optimized T-SQL stored procedures and queries using execution plans; implemented CLR objects
- Developed a C# WCF service integrating the internal system with external APIs
- Built business modules and user forms in Delphi

Stack: C#, WCF, MS SQL Server, T-SQL, Delphi

Education

Microservice Architecture

2023 - 2024

Otus.ru Online Education Platform

📍 Moscow, Russia

Tomsk State University of Control Systems and Radioelectronics

2017 - 2021

Bachelor's Degree in Computer Science

📍 Tomsk, Russia

Course 20483: Programming in C#

2016

Specialist Training Center at Bauman Moscow State Technical University

📍 Moscow, Russia

Course 10774: Querying Microsoft SQL Server 2012

2014

Specialist Training Center at Bauman Moscow State Technical University

📍 Moscow, Russia

A.N. Konyaev College

2010 - 2012

Information Technology and Computing Systems Technician

 Tver, Russia
